

Charting

**Tools to help
you trade**

Charting

You can easily access our improved charting tool from the Company Research section or our navigation bar. We have enhanced our key charting resources, adding powerful features that help ensure you get the best results from your research.

Charting is now more intuitive, automatically displaying the company you last viewed. To look up another company just enter its ASX code in the search box. Keep things simple by exploring a chart with our pre-defined settings, or create and save settings of your own – helping you quickly get what you need.

You can interact with basic chart features such as time frame and frequency. Add more companies for micro comparisons or add Indices, Sectors and Currency Pairs to compare on a macro level. When you're done, just remove them.

For more in-depth research, you can add indicators such as Bollinger Bands, Relative Strength Index and Simple Moving Average, editing criteria as you go along. Smart Text turns technical analysis into plain English, making it easier to understand.

You can update analysis and features indicators just by selecting a different technical strategy, with smart text helping you as you go along.

To see how events correlate with performance, turn on individual indicators such as Dividends and Research. Hover over research icons to access CBA Research Reports. Once indicators are selected, you can carry them over to a new company, making research easy and intuitive. When you're done, just save your Chart Settings and they'll be there for you to use again on your next visit, or if your preferences change, just delete them and start over.

For more screen space use the Hide and Show feature, making it easier to focus on your selected charts. You can also open the chart in a new window, enabling you to explore other areas of the site at the same time. When you've got the information you need to make a decision, you can execute a trade directly from this screen. Trade with confidence with our innovative Charting Tool.
